

## 2 Brick Piers

Fitting a Bloomsbury or Kingsbury into a 2 brick pier.

- A Width of shaved brick, between 85 and 87½mm (Based on a 455mm wide pier)
- B Width of gap to accommodate box, minimum 280mm
- W Width of a typical 2 brick pier, 455mm

In order to fit into a standard 2 brick pier, the bricks on the left and right hand sides need to be shaved back to leave a central gap between 280 and 285mm.

Based on a standard 2 brick pier which is approximately 455mm wide, the outer bricks would need to be cut down to a maximum of 87½mm and a minimum of 85mm
